

96-Well Magnet Plate S500

Catalog # (P/N): S500

Precautions:

CAUTION - STRONG MAGNETIC FIELD. This Permagen Labware 96-well Magnet plate contains very strong neodymium iron boron (NdFeB) magnets. People with pacemakers or other forms of Implantable cardioverter-defibrillators (ICD's) should always avoid this product as it may interfere with its operation. Never allow this product to come into contact with other magnets, metal, magnetized media such as credit cards etc., as damage and or injury can occur. Do not Autoclave or heat above 80°C, doing so will damage the magnets.

USER INFORMATION

Product Description:

Permagen Labware's 96-well Magnet Plate is designed for manual or automated paramagnetic bead separation with many microplates such as U-bottom, V-bottom, PCR plates, and more. The S500 is not recommended for flat bottom plates as they won't register over magnet locations correctly. Please use Permagen's U500 for such microplates. The magnets in our S500 Magnet plate will form beads into a ring shape at the bottom of each well leaving a clean area for aspiration. Separate up to 2ml samples or rapid small separations. Standard SBS footprint base which will fit into almost any standard liquid handler.

Care/ Cleaning:

If solutions are spilled onto the magnet plate carefully rinse with tap water and allow to air dry completely before use. A mild soap may also be used if more extreme cleaning is necessary. Always use care when storing product when not in use.

OTHER INFORMATION

Warranty and Liability:

For research use only. Not for use in diagnostic procedures.
