

96-Well Magnet Plate U380

Catalog # (P/N): U380

Precautions:

CAUTION - STRONG MAGNETIC FIELD. This Permagen Labware 96-well Magnet plate contains very strong neodymium iron boron (NdFeB) magnets. People with pacemakers or other forms of implantable cardioverter-defibrillators (ICD's) should always avoid this product as it may interfere with its operation. Never allow this product to come into contact with other magnets, metal, magnetized media such as credit cards etc., as damage and or injury can occur. Do not Autoclave or heat above 80°C, doing so will damage the magnets.

USER INFORMATION

Product Description:

Permagen Labware's U380 96-well Magnet Plate is designed for manual or automated paramagnetic bead separation with almost any available microplate or PCR plate on the market. The use of integrated corner locating brackets create precise, repeat performance without concern of losing location over magnets leading to an inconsistent ring at the bottom of the wells. The magnets in our U380 Magnet plate will form beads into a ring shape at the bottom of each well leaving a clean area for aspiration. Separate up to 350 µl samples. Standard SBS footprint base which will fit into almost any standard liquid handler.

Care/ Cleaning:

If solutions are spilled onto the magnet plate carefully rinse with tap water and allow to air dry completely before use. A mild soap may also be used if more extreme cleaning is necessary. Always use care when storing product when not in use.

OTHER INFORMATION
